

## Question

A programmer has been asked to write a program which states the biggest of two different inputted numbers.

Write an algorithm in pseudocode which will ask for 2 different numbers and output the biggest, along with a suitable message.

## Answer

## Question

A programmer has been asked to write a program which states the biggest of two different inputted numbers.

Write an algorithm in pseudocode which will ask for 2 different numbers and output the biggest, along with a suitable message.

## Answer

\*\*\*There are always different ways to solve a problem. This algorithm is just an example. What is important is that the logic is correct!\*\*\*

LOGIC:

- Ask the user for a number and store it in a variable
- Ask the user for another number and store it in a variable
- IF first number is greater than the second number
- DISPLAY first number with message
- ELSE
- DISPLAY second number with message

EXAMPLE ALGORITHM:

```
number1 = input("Enter a number")  
number2 = input("Enter a second number")  
if number1 > number2  
    print("The bigger number is: " + number1)  
else  
    print("The bigger number is: " + number2)  
endif
```
