What is the difference between a procedure and a function

A function returns data to the main program, while a procedure doesn't.

What is a WAN

A wide area network covers large geographical areas, such as worldwide.

What are some features that can make code more maintainable

Comments, indentation, formatting, use of subprograms, and naming conventions.

What does the SELECT statement do in SQL

It is used to select specific data from a table.

What is the imaginary cursor used for when reading a file

- A tool used to keep track of the current position in the file.

What are the tips for understanding and reading flowcharts

Start from the top and follow the arrows, remember what the symbols mean, read each symbol description, and logically work out what the algorithm is doing.
