Question

A programmer has been asked to write a program which will output the first 3 characters of a string that the user enters.

Write a program, in pseudocode, which will receive a string from the user and output the first 3 characters of the string.

(You can assume that the inputted string is >3 characters in length)

Question

A programmer has been asked to write a program which will output the first 3 characters of a string that the user enters.

Write a program, in pseudocode, which will receive a string from the user and output the first 3 characters of the string.

(You can assume that the inputted string is >3 characters in length)

Answer

There are always different ways to solve a problem. This algorithm is just an example. What is important is that the logic is correct!

LOGIC:

-Ask the user to enter a string
-Use a string manipulation method to find the substring from character 0 to 2
-Output the substring

EXAMPLE ALGORITHM:

```
string = input("Enter a word")
result = string.substring(0,3)
print(result)
```
