What does the UPDATE statement do in SQL **It is used to update/alter data that is already stored in the database.**	*In binary search, what happens if the search item is higher than the middle item* **The search is narrowed to the second half of the data set.**	*What is an IF-THEN-ELSE statement used for in programming* **It is used to see if a certain condition is true or false. If the condition is true, then a certain set of instructions will be executed. Else (condition is false), then a different set of instructions will be executed.**
What is the main difference between Wi-Fi and Bluetooth **Wi-Fi can support multiple devices at once, while Bluetooth can only support a small number of devices.**	*What are the two main types of cables used in ethernet networks* **Copper cables and fiber optic cables.**	*What happens during the sampling process* **Answer: Sound is recorded in snippets at set intervals.**
