*What is the first item's index in an array*

**The first item in an array is at index 0.**

*What is selection in programming*

**Selection is a control structure which contains instructions that do not have to be executed in sequence (non-sequential).**

*What are some examples of logic operations that a CPU will perform*

**Some examples of logic operations that a CPU will perform are the NOT operation, the AND operation, and the OR operation.**

*What is the language that the CPU can understand*

**Machine Code (Very Low Level Language)**

*What is the advantage of open source software*

**Free and often developed at pace with high levels of innovation due to the amount of people that can contribute.**

*What is a WHERE statement in SQL*

**It is used to specify the particular record(s) to be selected, updated, or deleted.**
