What are some methods used by criminals to gain access to a secure network

- "Brute Force Attacks, Denial of Service Attacks (DoS), Data Interception and Theft, and SQL Injections."

What are the two main types of system software

The two main types of system software are operating system software and utility software.

What is the purpose of security and user management in an operating system

The purpose of security and user management in an operating system is to ensure that a user's data is secure and users have different permissions.

What are variables in programming

Memory locations that can store a single piece of data (of a particular data type) at any one time.

What is the formula for calculating the size of an audio file

Answer: Multiply the sample rate, sample resolution, and duration of the recording, and then divide by 8 to convert to bytes.

What is phishing

- "A method used to acquire sensitive information about a user, such as usernames, passwords, and bank details, by impersonating legitimate companies and asking users to give away their sensitive information."
