What is ISP

ISP stands for Internet Service Provider, which is the company that provides you with your internet connection.

What is cloud computing

Cloud computing is a network of servers hosted on the internet that offers a range of services to store and process data for clients.

What is the purpose of security in an operating system

The purpose of security in an operating system is to ensure that a user's data is secure and not accessible by other users.

What type of memory is ROM

Answer: Non-volatile memory.

Why is it important to declare the data type of a variable in programming

It allows the computer to allocate the correct amount of memory for the variable, and to manipulate the data in the appropriate way.

What might happen if we don't store our data in a file

- We might lose the data permanently when the program is closed.
