

## Question

A programmer has been asked to write a program which will read the contents of a text file and output it to the user.

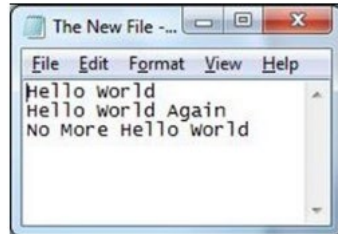

Write a program, in pseudocode, which contains the logic needed to solve the problem above.

## Answer

## Question

A programmer has been asked to write a program which will read the contents of a text file and output it to the user.

Write a program, in pseudocode, which contains the logic needed to solve the problem above.

## Answer

\*\*\*There are always different ways to solve a problem. This algorithm is just an example. What is important is that the logic is correct!\*\*\*

LOGIC:

- Open a text file in read mode with file handler
- Read line then output contents
- Repeat until at the end of the file
- Use the close() method to close the file.

EXAMPLE ALGORITHM:

```
newfile = open("NewFile.txt", "r")
while NOT myfile.endOfFile()
    print(newfile.readLine())
endwhile
newfile.close()
```
